### 11. Toxicological Information

**EFFECT OF OVEREXPOSURE - INHALATION:** May cause sensitization of susceptible persons by inhalation of aerosol or dust. May cause allergic respiratory reaction. May cause irritation of respiratory tract.

**EFFECT OF OVEREXPOSURE - SKIN CONTACT:** May cause skin irritation. May cause skin sensitization, an allergic reaction, which becomes evident upon re-exposure to this material. Prolonged exposure to the skin may dry the skin and cause dermatitis or burns.

**EFFECT OF OVEREXPOSURE - EYE CONTACT:** May cause eye irritation. Signs and symptoms may include: pain, tears, swelling, redness and blurred vision.

**EFFECT OF OVEREXPOSURE - INGESTION:** Acute intoxication by inhalation or ingestion of water soluble barium salts causes vomiting, diarrhea, convulsive tremors and muscular paralysis. Ingestion may cause raising of blood pressure. May cause severe gastrointestinal disturbance with headache, nausea, vomiting and diarrhea.

**CARCINOGENICITY:** No Information

**EFFECT OF OVEREXPOSURE - CHRONIC HAZARDS:** Repeated or prolonged skin contact may cause skin irritation and/or dermatitis and sensitization of susceptible persons. Some reports suggest that formaldehyde may cause respiratory sensitization, such as asthma, and that pre-existing respiratory and skin disorders may be aggravated by exposure. OSHA has identified 0.5 ppm as the "Action Level", 29 CFR.1048. Please refer to the OSHA Standard for guidance applicable to your specific operation. Formaldehyde vapor is a known animal carcinogen according to OSHA and NTP and is considered possibly carcinogenic to humans by inhalation. The International Agency for Research on Cancer considers formaldehyde to be a human carcinogen.
